

RECOGNIZE YOUR SYMPTOMS

IT COULD BE AORTIC STENOSIS

Shortness
of breath

Dizziness

Chronic lack
of energy

Chest
discomfort
or pain

Irregular
heartbeat

Fainting

Heart
Murmur

TIMING IS EVERYTHING

The delay of aortic valve treatment can result in greater risk both before and after any procedure. **This can also lead to further complications months and possibly years following a delayed intervention.**

This is a result of the irreversible heart damage, that leads to persistent symptoms as well as an increased risk of other harmful consequences to your health.¹
